

Silent Tools® Rental Tools

Rental tools are used for test purposes and to convince and secure a customer order. A dedicated assortment is handled by the distribution centre (DC).

The tools in the test assortment may previously have been used in a different rental tools test, and may therefore have visible marks after use.

- Do the test immediately.
- If the trial is successful, get the customer order.
- The test tool itself can NOT be sold to the customer.

After the test send back the test tool immediately to DC (max 14 day rental)

- Make a visual inspection of the tool; look for damage or corrosion on the body and the interfaces. In case the product appears to be damaged, make a report, to be attached to the tool before sending it back to DC.
- Lubricate the tool body with oil and wrap the tool in plastic folio before placing the tool body into the original package.
- The tool will be inspected and stored at DC.

In order to keep the tools as long as possible in the assortment:

- The tools should not be overloaded
- Used for test purposes, producing minimum of passes/components.

Test Report

To further develop the Rental Tool “package” Please give us your comments:

- Was the test successful and did we got the customer order.
- Give additional comments regarding the rental tools.
- How did we improve the application with Silent Tools products.

Attach this document in the package before sending it back to the DC
